Experience

- **Microsoft** Hyderabad, India
  Software Development Engineer *July 2024 - Present*
  - **EngHub Get Right (Sole Ownership & Rapid Prototyping):** Architected, designed, and implemented end-to-end telemetry pipelines (App Insights, OpenTelemetry, Grafana) with automated Kusto Sev3 alerting independently. Built the web portal from scratch in under 24 hours and delivered it to complete production readiness with scalable Azure Functions (.NET 8). Fine-tuned policy prompts, slashing false positive rates from 60% to <20%.
  - **File Transfer Service (High-Side Ownership):** Owned the high-side file transfer capability completely, implementing it end-to-end using .NET 8 and React 18 to optimize 5GB+ transfers with a 75% reduction in latency (down from 2 minutes to <30 seconds).
  - **DRI Portal (Accessibility & Production Readiness):** Took sole ownership of accessibility testing, driving comprehensive end-to-end compliance for a critical JIT access platform serving 1,580+ engineers and processing ∼11,000 bi-monthly requests.
  - **CARE (Compliance Analyzer & Rules Engine):** Spearheaded portal development for the compliance analyzer, engineering a centralized Summary Tab that serves as a unified destination integrating interactive data visualizers, security control visualizers, and key telemetry metrics.
  - **Security Leadership & Vulnerability Remediation:** Spearheaded security initiatives across the team by proactively investigating and remediating 30+ critical security vulnerabilities, driving them to full closure to maintain a compliant, 100% green operational posture.
- **IBM** India
  Software Engineering Intern *January 2026 - June 2026*
  - **Schema Orchestration:** Engineered a Java data transformation pipeline to seamlessly convert Avro and JSON schemas into COBOL copybooks, bridging modern serialization with legacy mainframe architectures.
- **Microsoft** Hyderabad, India
  Software Development Engineer Intern *April 2023 - June 2023*
  - **Developed and shipped a SCOMMI Agent VM extension**, streamlining automated agent installation and deployment workflows within the Azure Portal ecosystem.

Education

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech CSE	GNITS, Hyderabad	9.3	2020 - 2024

Projects

- **RaiseTheBar**: A one-stop engineering enablement portal built to help software engineers refine system design skills and advance coding proficiency in the era of AI, ensuring continuous mastery of emerging technologies and industry best practices.
- **SketchbookLM**: A Visual Cognitive companion combining AI with Enterprise-grounded knowledge for onboarding, documenting, and demos. Functions as an AI-native canvas where distinct surfaces weave into a single, continuous visual thread.
- **AI/NEWS**: Self-hosted full-stack AI news aggregator (FastAPI, React, Azure) utilizing a custom heuristic scoring algorithm to ingest, dedupe, and auto-tag multi-source data.

Technical Skills

- **Languages:** C#, Java, TypeScript, Python, JavaScript, C, C++, COBOL
- **Frontend:** React 18, Vite, Fluent UI, Tailwind CSS, HTML, CSS, Webpack
- **Backend & APIs:** .NET 8, ASP.NET Core Web APIs, FastAPI, Azure Functions, YARP Proxy
- **Cloud & Data:** Azure (App Services, Cosmos DB, Service Bus), Entra ID, Redis, SQLite, Avro
- **DevOps & Testing:** Azure Pipelines, Bicep, OpenTelemetry, Grafana, Kusto, xUnit, Jest

AI & Machine Learning

- **LLMs & GenAI:** Azure OpenAI, Semantic Kernel, Prompt Engineering, RAG, Fine-tuning
- **AI Agents:** Agentic Workflows, Microsoft AI Agents, AutoGen, Task Planning, Tool Use
- **Data Science & ML:** Predictive Modeling, Anomaly Detection, Scikit-learn, PyTorch
- **MLOps & Strategy:** MLOps Pipelines, Vector DBs (Pinecone/Milvus), Model Observability
